

## EC-Navigator, the “Command and Control” Center

A Fully Integrated Feature of 3Delta Systems’ Payment WorkSuite

EC-Navigator<sup>SM</sup> is the browser-based “Command and Control” center that seamlessly integrates all of 3Delta Systems’<sup>®</sup> Payment WorkSuite<sup>®</sup> applications. Permission-based access drives the operation of EC-Navigator, ensuring account integrity and risk reduction by automatically displaying only what each individual user is allowed to see.

Comprehensive administrative tools provide you with an unprecedented level of control to further secure user access as well as easily manage merchant information, customer accounts and cardholder data. Advanced reporting facilitates daily operations and decision-making by offering multi-level insights into transactions, user activity and stored data across the full suite of applications.

EC-Navigator is fully integrated into each 3Delta Systems (3DSI) service within Payment WorkSuite – CardVault<sup>®</sup>, EC-Zone<sup>®</sup>, EC-Linx<sup>®</sup> and EC-Batch<sup>®</sup>.

### Authenticate, Authorize and Protect

Permissions are the core of EC-Navigator’s layered security, providing account integrity and inspiring confidence. During the login process, user credentials are automatically passed through multiple authentication tests to ensure valid entry into Payment WorkSuite. These tests take place “under the hood” so that logging in is straightforward for your users. Stringent password criteria and required password updates strengthen each account’s overall security.

After access is granted, the interface is tailored to each user’s assigned permissions, securing and separating high-value data. For example, an executive-level user may have permission to view all data and perform all tasks, while operating personnel may only see a few relevant sections.

Account administrators have full control over their users’ permissions, and changes are immediately applied. For ease of maintenance, user groups can be created to assign the same set of permissions to multiple users. Permissions may also be assigned at the individual user level to handle unique situations.

### Streamline Daily Operations

Merchant, customer and cardholder information can be easily added and updated in EC-Navigator. Expandable sections allow you to focus on what is most important at that moment by displaying or hiding groups of information. On-page information lookup significantly reduces search time – users simply start typing and select the desired result as it appears. Instant help is conveniently accessible from each section to answer questions without requiring users to leave the page and is quickly hidden again when no longer needed.

EC-Navigator’s layout is designed to perform tasks with utmost efficiency. The intuitive interface is fast, and common functions are grouped together to minimize page switching.

### Emulate Real-World Company Structure

From single storefronts to large enterprises with multiple subsidiaries, 3DSI’s Payment WorkSuite brings together company data under a hierarchy that mirrors its real-world counterpart. Larger enterprises can effortlessly manage multiple merchants under a parent organization, multiple locations under a given merchant and multiple terminals per location. Smaller companies will appreciate the ability to begin with a streamlined hierarchy while also having the ability to scale as their business grows.

### Explore and Analyze Data

All businesses have data and the need to “make sense of it all” in order to be efficient and profitable. EC-Navigator offers you multiple ways to view, interact with, manipulate and report your payment data. Advanced filtering and column-sorting drive the online views for conducting quick evaluations, and detailed reports can be exported into multiple file formats for thorough offline analysis. Multiple merchants, locations and terminals can be selected for inclusive reports or excluded for specific inquiries. This comprehensive reporting system provides you with immediate access to operational information and empowers you to make decisions based on real-time intelligence.

### Tightly Integrated Business Processes

The complete Payment WorkSuite lineup – CardVault, EC-Zone, EC-Linx, EC-Batch and EC-Sentry<sup>SM</sup> – has been designed from inception as stand-alone applications that can be securely separated, yet tightly integrated, and universally administered from EC-Navigator.

CARD.VAULT<sup>SM</sup>

EC.NAVIGATOR<sup>SM</sup>

EC.SENTRY<sup>SM</sup>

EC.ZONE<sup>SM</sup>

EC.LINX<sup>SM</sup>

EC.BATCH<sup>SM</sup>

Payment WorkSuite<sup>®</sup> from 3Delta Systems<sup>®</sup> is a new high-performance payment platform whose deep, multilayer security provides peace of mind to customers – whether small business or large enterprise – for managing the increasing complexity of payment processing and data security requirements.
